

MARKET NOTICE

November 2, 2001

Publication of Real Time Energy Information

ISO Market Participants

SC Settlement Contacts

Currently, although Scheduling Coordinators are charged for Real Time Energy purchases above Market Clearing Price (MCP), including Out of Market (OOM), they see very limited energy price information until they receive their Preliminary Settlement Statements 38 days after the Trade Date. The Preliminary Settlement Statement shows:

- * the total dollars spent procuring imbalance energy over the MCP;
- * the total MWh of deviations; and
- * their own deviations.

But, the statement does not show hourly average prices above MCP or hourly MWh purchases for above-MCP quantities. This information is a key factor both in facilitating SCs' ability to validate their Settlement Statements and in providing increased transparency to real time energy prices.

On November 5, 2001, the ISO will begin publishing on OASIS, consistent with ISO Governing Board direction, additional information about real time energy purchases, both BEEP and OOM. We plan to publish the following data:

- * Average Incremental and Decremental volume and price calculated using BEEP, Out of Sequence (OOS) and OOM data hourly and published the day after Trade Day. This data will usually be available daily by 0800 to 1000, although the initial release on November 5 to be during the afternoon.
- * Average Incremental and Decremental volume and price calculated using BEEP, OOS and OOM data by 10-minute interval published seven days after Trade Day;
- * Average hourly Ex-Post Energy price (includes inc and dec) calculated consistent with BEEP only published the day after Trade Day; and.
- * Average hourly Ex-Post Energy price (includes inc and dec) calculated consistent with BEEP only Ex-post by interval published seven days after Trade Day.

Initially, the ISO will publish only current data. However, we are planning to publish historical data, as well, as time permits to validate and publish the historical average prices.

We have posted a screen shot (with artificial data) at
