Subject: CMR Comments of WPTF

Byron,

Attached are the comments of the WPTF regarding the ISO's congestion management reform proposal. We endorse the proposal developed by the California PX on this matter, and in our response so note from time to time a reference to their document.

Thank you for the opportunity to provide our input. The format for response was well thought out, and although it took some effort to complete the form, it will provide an invaluable guide to compare responses made by different parties.
