

Since the market affiliate rule looks at business units rather than the function within the business unit (or any firewalls that are set up), since he works for ECT I have to say I would be uncomfortable putting him on the distribution list. I know that he has access to the same info, but to give him access to our work product is probably a violation of the rule.

I am out of town, but if you have any questions please e-mail or leave me a voice mail, and I will reply after my hearing today.

Since he works for the same group that does our VAR calculation he should already have our positions, go ahead and send him the book, unless Susan Scott has a problem. Susan, let us know if you have a problem.

Dan,

Jan has suggested that Eugenio Perez is setup on distribution for the book. I'm not sure about putting him on the distribution since is a ECTN employee. However, according to Jan he works in the group that provides ET&S with the VAR calculation. What do you think or should Susan Scot have final say.

Let me know.

Debbie

He works for Sally Beck. Her group does VAR for all of Enron, so in that function he is Global. He doesn't share any of the information he collects on the business units with any of the trading or commercial people, to ensure we have no market affiliate problems. Is that enough protection or will we need to do more to separate him?

Jan, who does Eugenio Perez work for? When I typed in his name, it indicated he was with ECT.

Thanks, Debbie
